Day - 03

25 September 2023   06:44

Locators

If we want to use linkText and particalLinkText the visible should
Be inside <a> tag in HTML code.

cssSelector -

- In cssSelector we can use any Attribute to locate the
   webElements.

- **Syntax**
   [attributeName='attributeValue'].

   Tagname[attributeName='attributeValue'].

Drawback of cssSelector

We can not use Visible text

Example :

< input Id='seleniumbatch'

[id = ' seleniumbatch ']

Input[id = ' seleniumbatch ']

Xpath -

It is an popular locator to locate the webElements by using xpath expression.

Types of xpath : -

1. Absolute xpath - ' / ' parent to immediate child
2. Relative xpath- ' // ' parent to any child .

```
<html>
  <head>
     <title> Registration </title>
  </head>
  <body>
     <input type="text" placeholder="Username">
     <input type="password" placeholder="Password">
  </body>
</html>
```

Example to locate by using Absolute xpath

Ex 1 :-   /html/body/input[1]

Ex 2 :- /html/body/input[2]
