Day - 05

27 September 2023   06:51

7. **Xpath by multiple attributes or visible text**

// tagName [@ attributename = ' attributeValue ' and @attributename=' attributeValue']

Ex : //input[@type='text' and @name='username']

// tagname [text() = 'VisibleText' and @attributename = ' attributeValue']

Ex : //label[text()='Keep me logged in' and @for='keepLoggedInCheckBox']

8. **Xpath for dependent and independent**

To locate static and dynamic webelement.

Steps :
1. We have identify static and dynamic webelement.
2. We have to locate the static webelement.
3. We have to perform backword traversing to the common parent which is highlighting both static and dynamic.
4. We have travel to the dynamic webelement.

9 . ***Xpath by index***

(//a[contains(text(),'Jewelry')])[1]

Locators - **tagName();**

- **We have to pass tagName**
